## Diabetic Admission/Drop off for Glucose Curve

The purpose of admission today is to perform a glucose curve on your pet that allows us to track blood sugar over an extended period of time. This will allow us to make changes to your pet's insulin to better regulate blood sugar.

### Phone number where you can be reached today

---

**Insulin Type (Prozinc, Vetsulin, etc)**

**Insulin Dosage in Units**

**Insulin Frequency**

---

Once daily  
 Twice daily

### What time was insulin given (or will be given) on the morning of admission?

---

Appetite, thirst, urination, and behavior changes can help us determine how well your pet is regulated. Please indicate below if your pet has excessive, normal, or less than normal of these signs.

### Behavior (describe below if abnormal)

Normal  
 Abnormal

---

### Appetite

Normal  
 More hungry than usual  
 Less hungry than usual

### Thirst

More than usual  
 Normal  
 Less than usual

### Urination

More than usual  
 Normal  
 Less than usual

### Current Diet - brand, amount, and frequency

---

If we feel your pet is experiencing significant anxiety while being kenneled here (i.e. pacing, vocalizing, hiding, chewing at the kennel, etc), will you authorize

us to administer a dose of anti-anxiety medication (trazodone for dogs, gabapentin for cats) to help them relax while here? We feel that addressing stress and anxiety while at the clinic helps to make the experience better for your pet. The cost is \$5.00.

**Anxiety Medication**
